

Harvey Valley Groundwater Basin

- Groundwater Basin Number: 6-93
- County: Lassen
- Surface Area: 4,500 acres (7 square miles)

Basin Boundaries and Hydrology

The Harvey Valley Groundwater Basin is an alluvial filled valley located in southwest Lassen County at the base of Crater Lake Mountain to the north. The basin is bounded by Recent basalt of Crater Lake Mountain to the south. The basin is bounded on all other sides by Pleistocene basalt of Cone Mountain, Harvey Mountain, and Squaw Valley. Annual precipitation ranges from 23- to 25-inches.

Hydrogeologic Information

Note: This basin summary was prepared using available published information and data. In addition, a comprehensive literature search was conducted using California, Oregon and Nevada Water Resources, and Mines and Geology web sites, UC and UNR Library sites, and The Resources Agency Library. The searches were made using basin names linked to keywords such as geology, groundwater, hydrogeology, and references to the regional geology. Because no local area hydrogeologic data are available, this basin description is incomplete. Where no local area references or site specific data/publications were found, regional references are listed to provide a regional framework for the basin or subbasin.

Water-Bearing Formations

Section incomplete.

Groundwater Level Trends

Section incomplete.

Groundwater Storage

Section incomplete.

Groundwater Budget (Type B)

Deep percolation of applied water is estimated to be 5 acre-feet based a 1997 survey conducted by the California Department of Water Resources.

Groundwater Quality

Section incomplete.

Well Production Characteristics

Well yields (gal/min)	
Municipal/Irrigation	No known data
Total depths (ft)	
Domestic	No known data
Municipal/Irrigation	

Active Monitoring Data

Agency	Parameter	Number of wells /measurement frequency
	Groundwater levels	0
	Miscellaneous water quality	0

Basin Management

Groundwater management:

Water agencies

Public

Private
