

Hidden Valley Groundwater Basin

- Groundwater Basin Number: 6-63
- County: Inyo
- Surface Area: 18,000 acres (28.1 square miles)

Basin Boundaries and Hydrology

This groundwater basin underlies Hidden Valley, Ulida Flat and Sand Flat in south central Inyo County and is bounded by impermeable rocks of the Panamint Range (Jennings 1958). Surface drainage flows toward a playa in Hidden Valley and a closed basin in San Flat (Jennings 1958). Average annual precipitation ranges from 6 to 8 inches.

Hydrogeologic Information

Water Bearing Formations

Groundwater can likely be found in alluvium of Quaternary age. Alluvium typically consists of unconsolidated, fine- to coarse-grained sand, pebbles, and boulders with variable amounts of silt and clay.

Restrictive Structures

Unknown.

Recharge Areas

The principal source of recharge to the basin is likely percolation of runoff from surrounding mountains, with minor contribution from percolation of precipitation to the valley floor.

Groundwater Level Trends

No wells are known to exist in this basin.

Groundwater Storage

Groundwater Storage Capacity. Unknown.

Groundwater in Storage. Unknown.

Groundwater Budget (Type C)

No information is available.

Groundwater Quality

Characterization. Unknown.

Impairments. Unknown.

Well Production characteristics
